1 Projects by @hfagerlund

- **quiz_app**

A 'quiz' app with a custom GraphQL API backend (using Laravel 10), and Vue3 front-end. Built using Sail (docker-compose) running a MySQL database [18].

- **docker-for-docskimmer**

This project enables users to test the compatibility of various doc-Skimmer theme and MkDocs versions using Docker. [19].

- **hey-haskell**

A learning by doing approach to introduce functional programming using Haskell [17].

- **erlang-experiments**

The groundwork for a Dockerized Erlang app [11].

- **hellofromlua_rock**

A custom Lua rock. [12]. Usage is shown in the hello-lua demo [8].

- **machine-learning-classifier-iris**

A comparison of machine learning algorithms for making predictions written in Python (v3.7) and using a built-in dataset included with scikit-learn [13]. Data visualizations are also included.

This repository contains new feature development continued from the Jupyter version [10].

- **mkdocs-docskimmer**

docSkimmer is an accessible, responsive, minimalist theme originally built for the static documentation site-generator MkDocs [4]. A live demo is available at documentation site.

The docSkimmer theme has also been ported for Jekyll [3].

- **mkdocs-docstyler-plugin**

docstyler is a plugin for MkDocs that adds persistent, preferred and/or alternate stylesheet links to custom MkDocs themes [15].

- **jeekyll-docskimmer-theme**

jeekyll-docskimmer-theme is the official port of docSkimmer theme to Jekyll [3].

- **strip_anchors**

Source code for the custom strip_anchors Twig extension. This repository shows how the filter can be used in a Symfony 4 project to transform HTML content into valid RSS content for a feed [9].

- **elections-carousel-component**

This project is a component-based carousel presentation of election results data from a JSON API. Built using React and Webpack [6].

- **elm-in-progress**

Experimentation in Elm v0.19.0. [7].

- **hfagerlund.github.io**

My GitHub Pages site which currently serves as a table of contents listing of my open-source projects on GitHub [5].

- **osprojects**

A catalog of GitHub open source projects by Heini Fagerlund (@hfagerlund) in \TeX , org, and PDF formats [14]. Created using Emacs.

- **react-app-starter**

react-app-starter is a simple Dockerized React app skeleton to be used as a time-saving and easy to understand starter for new React projects [16].

How to use this repo as a template

- **git-add-msg**

git-add-msg is a git extension that can be used to automatically update Trac tickets with comments without leaving the command-line interface [1].

- **blog**

This (mirror) repository includes modular scripts for a page scroller and page event analytics tracking [2].

\LaTeX
