1   Projects by @hfagerlund

- **machine-learning-classifier-iris**

  A comparison of machine learning algorithms for making predictions written in Python (v3.7) and using a built-in dataset included with scikit-learn [8]. Data visualizations are also included.

  This repository contains new feature development continued from the Jupyter version [7].

- **mkdocs-docskimmer**

  docSkimmer is an accessible, responsive, minimalist theme originally built for the static documentation site-generator MkDocs [3]. Visit the documentation site.

  The docSkimmer theme has also been ported for Jekyll.

- **mkdocs-docstyler-plugin**

  docstyler is a plugin for MkDocs that adds persistent, preferred and/or alternate stylesheet links to custom MkDocs themes [9].

- **jekyll-docskimmer-theme**

  jekyll-docskimmer-theme is the official port of docSkimmer theme to Jekyll.

- **strip_anchors**

  Source code for the custom strip_anchors Twig extension. This repository shows how the filter can be used in a Symfony 4 project to transform HTML content into valid RSS content for a feed [6].

- **elections-carousel-component**

  This project is a component-based carousel presentation of election results data from a JSON API. Built using React and Webpack [5].

- **hfagerlund.github.io**

  My GitHub Pages site which currently serves as a table of contents listing of my open-source projects on GitHub [4].

- **git-add-msg**

  git-add-msg is a git extension that can be used to automatically update Trac tickets with comments without leaving the command-line interface [1].

- **blog**

  This (mirror) repository includes modualar scripts for a page scroller and page event analytics tracking [2].
